REWST APP BUILDER

*Deliver unified app experiences for your clients and employees*

MSPs rely on a growing patchwork of tools to run their businesses. The lack of integration means employees must juggle multiple applications to complete individual tasks. Clients, meanwhile, lack a central online portal to interact with MSPs and thus still rely on email and the phone.

App Builder is a low-code module for extending Rewst automations with branded front-end experiences or web apps. It excels at consolidating disparate tools into unified front-end experiences that further streamline internal and client-facing operations. Best of all, App Builder empowers you to build exactly what you need for the uniqueness of your MSP and clients.

UNLOCK IMMEDIATE VALUE WITH PREBUILT APPS

Rewst offers prebuilt apps for common use cases that package the necessary pages, components, navigation, workflows, and forms. Because they run out of the box, these apps deliver immediate business value but can be customized or extended with additional functionality.

The client portal home screen enables easy access to forms that trigger Rewst automations.

ALL-IN-ONE CLIENT PORTAL

Deliver a fully white-labeled portal, enabling self-service access to relevant Rewst forms and automations, including user onboarding/ offboarding, group changes, password resets, reset locked accounts, and more.

OPERATIONAL ANALYTICS

Gain actionable insights that help MSPs determine the next processes to automate based on high-volume ticket categories as well as proactively monitor device stock, SaaS license usage, and device EOL.

FORMS PORTAL

Allow your technicians and clients to access relevant Rewst forms easily based ongranular permissions. This app is a great starting block for your users to learn App Builder and quickly add value to your business.

BUILD EXACTLY WHAT YOU NEED FOR YOUR MSP AND CLIENTS

Beyond prebuilt apps, App Builder empowers you to build custom apps tailored precisely to the needs of your business and clients. If you think it, you can build it with App Builder, whether it's a client onboarding wizard, sales matrix, vCIO dashboard, or more.

Use the low-code page builder to design screens by dragging and dropping UI components such as text, images, buttons, data tables, grid containers, forms, and more. All apps can be fully branded with your logo, color palette, and typography. Simply upload your logo to auto-generate colors you can choose from. Technical users can access the underlying HTML and CSS for full control. Apps can also be hosted on your preferred subdomain to provide a seamless online experience.

BENEFITS OF APP BUILDER

Increased efficiency
Unify workflows and data in a single pane of glass, removing the need to use multiple tools.

MSP differentiation
Provide clients with engaging branded apps to interact with your MSP and request service.

Maximize IT value
Rationalize your stack and unlock more value from existing tools while closing process gaps.

Customer self-service
Empower clients to access account-specific data, forms, and workflows in one portal.

Data-driven decisions
Aggregate data from across your tools to enable more proactive, informed decisions.

Amplify automation's benefits
Extend your Rewst automations and forms with branded front-end experiences.
